HATCO® CORPORATION PRODUCT RELEASE

The Intelligent Heated Display Cabinet Keeps
Your Customers' Attention on the Food – Guaranteed

Hatco® Corporation's Intelligent Heated Display Cabinet with Humidity regulates air temperature and simultaneously balances humidity levels to provide the best environment for holding pizzas and other foods, while a 360˚ view and energy efficient LED lighting keep the focus on the product. The air flow pattern is designed to maintain consistent cabinet temperature without drying out the food and enables the cabinet to recover temperature rapidly after opening and closing the doors. The IHDCH features an LCD touchscreen display on the back that controls temperature, humidity and timers for each food location, as well as a USB port on the back to establish standard, pre-programmed settings. Accessory adjustable arms – and shelves for the IHDCH-28 model – allow for different food displays, with accessory sign holders available.
