

PRODUCT RELEASE

Hatco® Corporation Brings the Power of Induction to Meet Your Hot Food Well Needs

Hatco® Corporation is introducing the Drop-In Induction Dry Well, which utilizes induction technology to offer a plumbing-free solution for safely keeping hot foods fresh and at optimum serving temperatures. With a durable and tough glass-ceramic well bottom that can be adjusted to accommodate a 2.5" or 4" (64 or 102 mm) deep food pan, the well evenly heats the pan to maintain food's "just-made" quality. The IWELB model includes two heat zones, with two temperature probes per zone, and a control panel to adjust the unit's temperature. The well features a sensor that prohibits the unit from turning on unless a pan is present and can be used with a combination of full-size, half-size, third-size and quarter-size stainless steel food pans.
